Planta An International Journal of Plant Biology

Founded in 1925. Volumes 1–34 (1945) edited by *W. Ruhland* and *H. Winkler*. (Volumes 1–21, 1934 published as „Zeitschrift für wissenschaftliche Biologie", Abteilung E.) Volumes 35–47 edited by *W. Ruhland* and *O. Renner*. Volumes 48–51 edited by *W. Ruhland, L. Brauner* and *E. Bünning*. Volumes 52–68 edited by *L. Brauner* and *E. Bünning*

Copyright

Submission of a manuscript implies: that the work described has not been published before (except in the form of an abstract or as part of a published lecture, review, or thesis); that it is not under consideration for publication elsewhere; that its publication has been approved by all coauthors, if any, as well as by the responsible authorities at the institute where the work has been carried out; that, if and when the manuscript is accepted for publication, the authors agree to automatic transfer of the copyright to the publisher; and that the manuscript will not be published elsewhere in any language without the consent of the copyright holders.

All articles published in this journal are protected by copyright, which covers the exclusive rights to reproduce and distribute the article (e.g., as offprints), as well as all translation rights. No material published in this journal may be reproduced photographically or stored on microfilm, in electronic data bases, video disks, etc., without first obtaining written permission from the publisher.

The use of general descriptive names, trade names, trademarks, etc., in this publication, even if not specifically identified, does not imply that these names are not protected by the relevant laws and regulations.

While the advice and information in this journal is believed to be true and accurate at the date of its going to press, neither the authors nor the editors and the publisher can accept any legal responsibility for any errors or omissions that may be made. The publisher makes no warranty, express or implied, with respect to the material contained herein.

Special regulations for photocopies in the USA

Photocopies may be made for personal or in-house use beyond the limitations stipulated under Section 107 or 108 of U.S. Copyright Law, provided a fee is paid. This fee is US$ 0.20 per page, or a minimum of US$ 1.00 if an article contains fewer than five pages. All fees should be paid to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA, stating the ISSN 0032-0935, the volume, and the first and last page numbers of each article copied. The copyright owner's consent does not include copying for general distribution, promotion, new works, or resale. In these cases, specific written permission must first be obtained from the publisher.

Other regulations

Authors publishing in this journal can, under certain conditions, benefit from library and photocopy fees collected by VG WORT. Authors of German nationality and those resident in the Federal Republic of Germany or Berlin (West), as well as citizens of Austria, Switzerland, and member countries of the European Community, may apply to Verwertungsgesellschaft WORT, Abteilung Wissenschaft, Goethestraße 49, D-8000 München 2, for detailed information.

Advice to Authors

The illustrations that will appear in your contribution will be shown to best advantage if you follow the brief set of instructions below. Please read carefully. Thank you.

The Publisher

Preparation of Line Drawings

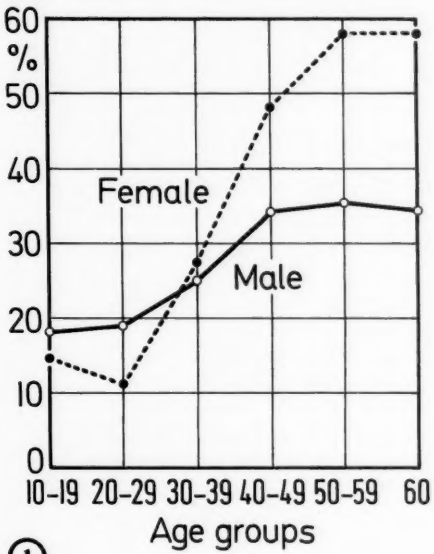
Illustration copy should be prepared to fit the format of the column or printed page (print area) so that 1:1 reproduction is possible. In case reduction is absolutely necessary, please state the alternative scale desired.
The publisher reserves the right to reduce or enlarge illustrations.

Drawings are to be twice the final size and executed in indelible black ink.

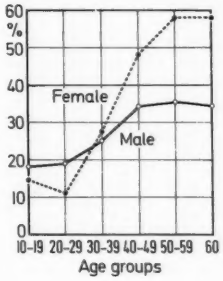
Important points to note: thickness of lines, size of inscriptions, size of measuring points, adequate spacing of shaded and dotted areas.

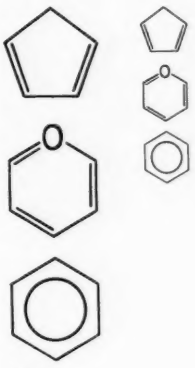
Words should be in upper- and lower-case characters, not capitals.

The following are optimal sizes as they finally appear in the journal:
Capital letters and numbers: 2 mm
Lower-case letters: 1.6 mm.



①





②

samples 1 to 5 show the original size and after 50% reduction

1234567890 1·5° III IV VIII IX ∞ % ≈
[(=-+x÷ !?:" ",)] (A) (B) (a) (b)

Selection of Illustration Material for Halftones (photographs, micrographs, X-rays, instrument traces etc.).

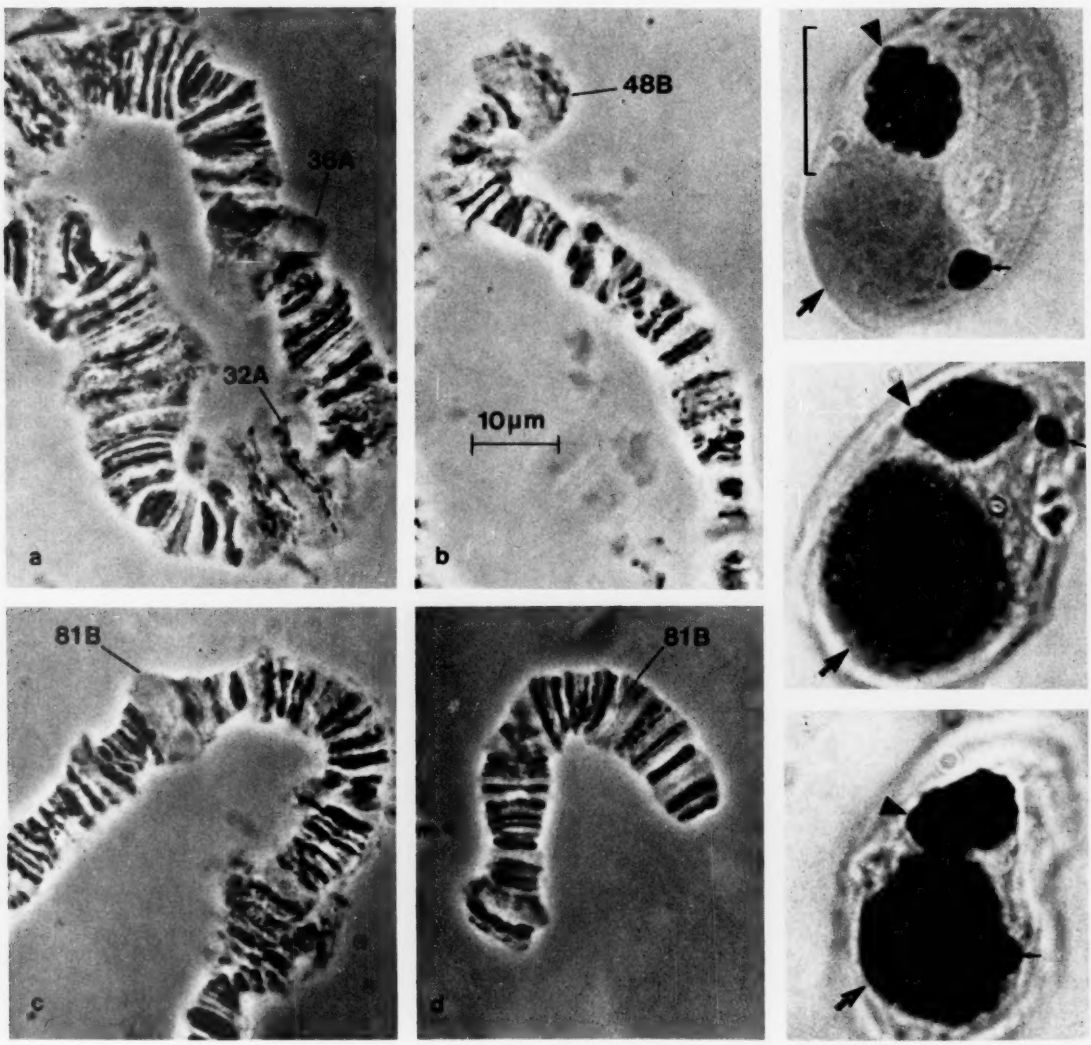
Photographs should be sharp, well-contrasted glossy prints of the original negative, trimmed at right angles. Halftone illustrations should be prepared to fit the format of the printed page (print area) so that 1:1 reproduction is possible. In case reduction is absolutely necessary, please state the alternative scale desired. The publisher reserves the right to reduce or enlarge illustrations.

Mark or crop marginal portions which are not required (at right angles, please).

Please see that illustrations which are to appear together are mounted accordingly as plates and that they correspond in size. Also they should not exceed the print area of the page, including room for the legend.

With X-rays, please indicate the significant parts on the back of the copy, or on an overlay.

Inscriptions, marks and scale lines should preferably be drawn neatly in black ink in an appropriate size on the face of the illustrations. Inscriptions should be about 3 mm high. Where Letraset is used, please handle it carefully and protect the photographs with an overlay.



Planta An International Journal of Plant Biology

Instructions to authors

1. General

Manuscripts should be typewritten, double-spaced *throughout,* with wide margins, and should be submitted in *duplicate* (original and a carbon or photocopy).

Papers should be clear and concise and should be written in correct English, this being the responsibility of the authors.

Short papers making one single interesting point may be published out of order as *Short communications*. Maximum length is two printed pages, including tables, etc. (One printed page equals three typescript pages.) The decision as to whether a paper qualifies as a *Short communication* rests with the editors.

To accelerate publication only **one set of proofs** is sent to the authors. This shows the final layout of the paper as it will appear in the journal. It is therefore essential that manuscripts are submitted in their final form, ready for the printer, and that the approximate desired positions of figures and tables are marked on the margins. Proof reading should be limited to the correction of typographical errors. Any other changes involve time-consuming and expensive work. If absolutely necessary and space permitting additions may be made at the end of the paper in a *Note added in proof*.

2. Text

To become familiar with the general layout of articles published in *Planta*, please consult a recent issue of the journal.

Abstract. All papers including *Short communications* should be preceded by an abstract which should state the plant material and EC numbers.

Key words. Authors should suggest key words (not more than six – following the abstract and in alphabetical order) characterizing the scope of the paper, the principal plant materials, and the main subjects of the work.

Running title. A running title should be suggested by the author(s) (not to exceed 75 letters and intervals).

Headings. Main headings (Introduction, Material and methods, etc.) should be placed on separate lines.

Small print. Footnotes, Material and methods sections, Acknowledgements, References, tables, and legends for illustrations should be marked for small print.

Genus and species names and words to be emphasized should be underlined singly, for *italics*.

Units and symbols. Temperatures may be expressed in degrees Celsius, time in seconds (s), minutes (min), hours (h), days (d), etc. Otherwise, the *International System of Units* (SI, Système International d'Unités) should be used wherever possible. (Consult, e.g., U.S. Department of Commerce, National Bureau of Standards, Special Publication 330, *The International System of Units*, latest edition, or Rotter, F. (1979) Das Internationale Einheitensystem in der Praxis. Physik in unserer Zeit **10**, 43–51)

Abbreviations. For correct usage of abbreviations authors should consult the list of *Units, symbols, abbreviations* printed in the first issue of each volume.

Footnotes in the text should be numbered consecutively and should be used sparingly.

Literature citations in the text should be by author(s) and year. Where there are more than two authors, only the first should be named, followed by "et al.".

Examples: Iino (1982) has shown that ... Experiments in this laboratory (Iino 1982) have shown that ... Harris et al. (1982) have shown that ...

The list of **References** should include only publications cited in the text. They should be cited in alphabetical order under the first author's name, listing all authors (surnames followed by initials throughout; do not use "and") and the complete title (in English and French titles, do not capitalize nouns, adjectives, etc.), according to the following rules and examples:

a) Articles from journals and other serial publications (e.g., Annual Reviews): author(s), year (in parentheses), title, series as abbreviated in *Bibliographic Guide for Editors and Authors* (published by the American Chemical Society), volume followed by a comma, first and last pages

Iino, M. (1982) Inhibitory action of red light on the growth of the maize mesocotyl: evaluation of the auxin hypothesis. Planta 156, 388–395

b) Articles from non-serial collective publications (symposia volumes, encyclopedias, etc.): author(s), year (in parentheses), title followed by "In:", title of the volume, volume and/or part (vol., pt.) if appropriate, inclusive pages of article (pp.), name(s) of editor(s) followed by "ed(s).", publisher, location.

Wagner, G. (1979) Actomyosin as a basic mechanism of movement in animals and plants. In: Encyclopedia of plant physiology, N.S., vol. 7: Physiology of movements, pp. 114–126, Haupt, W., Feinleib, M.E., eds. Springer, Berlin Heidelberg New York

c) Books: author(s), year (in parentheses), title, edition (edn.) if appropriate, publisher as under *b)*.

Lüttge, U., Higinbotham, N. (1979) Transport in plants. Springer, Berlin Heidelberg New York

3. Tables

Tables should be prepared consulting a recent issue of the journal and should be numbered consecutively with Arabic numbers. Footnotes to tables should be indicated by lower-case superscript letters, beginning with [a] in each table.

4. Illustrations

The number of illustrations (line drawings, wherever possible) should be limited to the minimum needed to clarify the text. Double documentation in figures *and* tables is not acceptable. Previously published illustrations are not accepted except under special circumstances.

Requests for color illustrations can be approved only if authors agree to bear the excess costs for reproduction and printing.

All figures (photographs, graphs, diagrams) should be numbered consecutively and should be submitted as sharp, glossy, high-quality photographic prints. Figures that are to appear together should be photographed or mounted together **on flexible white drawing paper** (0.4 mm thick, about 300 g/m^2). **New reproduction methods require postcard thickness and not thick cardboard.** All figures and groups of figures should be trimmed at right angles and should be of a size permitting *direct printing:* no more than 8 cm across for column width, no more than 17 cm across for page width, no higher than 22.5 cm. (The publisher reserves the right to reduce or enlarge illustrations.)

In **line drawings,** all lines should be of uniform thickness; letters and numbers should be of professional quality and proper dimensions, approx. 2 mm high when reproduced.

Photographs should exhibit high contrast. Arrows, letters, and numbers should be inserted with template rub-on letters. If this is not possible, inscriptions should be made on a transparent overlay (not on the actual photograph). Micrographs should have an internal magnification marker; the magnification should also be stated in the legend.

Legends. Each illustration should be provided with a concise, descriptive legend. Phrases such as "For explanation, see text" should be avoided. The legends are part of the text and should be listed at the end of the typescript, starting with a new page.

5. Offprints

Seventy-five (75) offprints of each article are provided free of charge; additional copies may be ordered at cost price when the proofs are returned.

Plant Gene Research

Basic Knowledge and Application

Edited by
E. S. Dennis, B. Hohn, Th. Hohn (Managing Editor), P. J. King, J. Schell, D. P. S. Verma

The second volume

Genetic Flux in Plants

Edited by **B. Hohn,** Friedrich-Miescher-Institut, Basel, Switzerland,
and **E. S. Dennis,** CSIRO, Division of Plant Industry, Canberra City, Australia

1985. 40 figures. Approx. 240 pages. ISBN 3-211-81809-X
Cloth DM 98,–, öS 690,–

This volume gathers together for the first time the most recent information on plant genome instability. The plant genome can no longer be looked upon as a stable entity. Many examples of change and disorder in the genetic material have been reported recently. Chloroplast DNA sequences have been found in nuclei and mitochondria. Mitochondrial DNA molecules can switch between various forms by recombination processes. Stress on plants or on cells in culture can cause changes in chromosome organization. DNA can be inserted into the plant genome by transformation with the Ti plasmid of **Agrobacterium tumefaciens,** and transposable elements produce insertions and deletions.

Contents: Movement of Genetic Information from the Environment to the Plant: Viruses. DNA Flux Across Genetic Barriers: The Crown Gall Phenomenon. – Movement of Genetic Information Between the Plant Organelles: Movement of Genetic Material Between Plants Chloroplast and Mitochondrion in Higher Plants. Movement of Genetic Information Between the Chloroplast and Nucleus. Movement of Genetic Information Between Plant Organelles: Mitochondria-Nuclei. – Movement of Genetic Information Within Plant Organelles: Supernumerary DNAs in Plant Mitochondria. Plant Mitochondrial DNA: Unusual Variation on a Common Theme. Repeated Sequences and Genome Change. Sequence Variation and Stress. – Evolutionary Aspects: The Activation of Maize Controlling Elements. Somaclonal Variation: The Myth of Clonal Uniformity. – Subject Index.
